

Opera House | Oslo, Norway

The Oslo Opera House is one of Norway's most iconic buildings — a masterpiece of architecture and engineering. Behind its elegant design and world-class performances lies advanced technical infrastructure, where Enwa contributes with sustainable, chemical-free water treatment solutions for reliable and efficient operation.

An Architectural Landmark

It took Norway 100 years to realize its dream of building an opera house. After an international architecture competition, the Norwegian firm Snøhetta was awarded the project — resulting in one of the country's most iconic landmarks.

Opened in 2008, the Oslo Opera House rises from the waters of the Oslo Fjord like a glacier of white marble. Its striking roof is open to visitors, inviting everyone to walk on top and enjoy panoramic views of the city and harbor. With its unique combination of marble, oak, and aluminum, the building has become both an architectural and cultural symbol of modern Norway.

Our Delivery – EnwaMatic®

Sustainable Water Treatment for Comfort and Efficiency

Behind the scenes of this architectural masterpiece lies advanced technical infrastructure that ensures optimal indoor climate and operational reliability. Enwa Water Technology delivered EnwaMatic water treatment systems for both the heating and cooling systems of the building.

Opera House | Oslo, Norway

The EnwaMatic technology provides continuous, chemical-free treatment that stabilizes water quality, prevents corrosion, and reduces maintenance. This ensures energy efficiency, system longevity, and reliable performance — crucial for a landmark that welcomes thousands of visitors every week.

A Perfect Balance of Art, Architecture, and Technology

The Oslo Opera House stands as a symbol of innovation — not only in architecture and design but also in technical execution. With Enwa’s sustainable water treatment solution, the building maintains its world-class performance both on stage and behind the scenes.
